

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

VII. *Remark of the Case of a poor Woman who had a Fœtus in her Abdomen for Nine Years, opened May 6th 1739. by William Bromfeild, Surgeon.*

THIS poor Woman, about Nine Years since, was with Child, and, at the Expiration of the usual Time, was attempted to be delivered.—The Child was so far advanced in the Passage, that the Midwife declared, that in less than Two Minutes the Child would be in the World; but, on the Woman's suddenly turning herself, the Child slipped from the Midwife, and could not be found by her again.

Previous to her being pregnant, she had been afflicted with the Venereal Disease, and had had a violent Discharge of a fetid Matter from the *Uterus*, and was then under the Care of Mr. *Balgay*, Surgeon, who favoured me with being present when he opened the Body. —She had been salivated once or twice in our Hospitals, but to no Purpose.—After the Time of attempting to deliver her, to the Hour of her Death, she had prodigious Discharges of a fetid Gleet, and frequently indigested Matter with Blood from the *Uterus*.—There appeared a Tumour on the Right Side, which was moveable to the other, though its Attachment was chiefly to the Right.—She was troubled with a Suppression of Urine, ever since the Attempt of Delivery, and within this Twelvemonth went to Stool in a Cloth insensibly, and what *Fæces* descended into the *Rectum*, were immediately discharged.—She gradually wasted from a hale lusty Woman,

Woman, till she was reduced to a mere Skeleton.—
This Account is the best I could collect from the
good Women who were present at the opening of
the Body, and most of them at the Time of her ex-
pected Delivery, and have been very conversant with
her ever since. ———

Upon opening the Body —

The *Omentum* was intirely wasted: The *Perito-
neum* was greatly inflamed, and adhered to the sub-
jacent Tumour, which I expected (not being acquainted
with the Case) to be a Tumour of the same kind I
had lately seen, which was chalky; but, upon cutting
into it, there appeared the *Os Frontis*, and, on pro-
ceeding farther, the Arm, Leg, and Ribs, on the Left
Side,—with some viscid Matter in the Interstices.
—It was seemingly contained in a thick membranous
Cyst—which, upon Dissection, proved to be the
containing *Membranes* of the *Fætus*, contracted to
the Shape of the *Fætus* in *Utero*, and gave the Tu-
mour an oval Form.—The Situation of the *Fætus*
was in the concave Part of the Right *Ilium*, and by
its Cyst was attached to the *Intestines*, *Colon*, and *Cæ-
cum*.—It had some Vessels that ran on the Surface
of the Cyst, that was sent from the internal *Iliacs* of
the contrary Side.—By its Pressure on the Right
Ureter, it had hindered the Descent of the Urine,
and had greatly enlarged both the *Ureter* and *Pelvis*,
(of the Right Kidney) which was greatly distended
with Urine, so that what descended into the Bladder,
must steal in *guttatim*.

The *Uterus* and *Fallopian Tubes* appeared of their
usual Size, only inflamed.—The *Fimbriæ* were
loose and fluctuating. On examining farther into the
Pelvis,

Pelvis, there was near Six Ounces of fetid Matter lying between the *Rectum* and *Uterus*, which near its Neck was perforated, and the Parts were very rotten. From its Neck almost to the Extremity of the *Vagina*, the Muscles of the *Anus* were nearly destroyed. — There were some few indurated little Tumours adhering loosely to the Cyist of the *Fætus*. — There were several little Parts appeared like carious Bones found in the Matter contained in the *Pelvis*. —

From what has been said, it appears that the *Fætus* had been Nine Years in the *Abdomen*.

VIII. *A Letter from Mr. John Powell, to Sir Hans Sloane, Bart. Pr. R. S. &c. concerning a Gentlewoman who voided with her Urine, hairy crustaceous Substances: To which is annexed Sir Hans Sloane's Answer, containing several Observations of extraordinary Substances voided by the Urinary Passages.*

Honoured SIR, Pembroke, July 16. 1733.

HAVING the Opportunity of sending now to London by a safe Hand, I make bold to send you in a Box, some things that a worthy Divine's Daughter of this Neighbourhood, whose Father has been some Years dead, and her Husband now too, has voided ever since *Michaelmas* last was Two Years,
